

***"INEXTIA ensures that the maintenance work operates efficiently across teams and locations, and that our documentation is always up-to-date and easily accessible."***

System Administrator, Lasse Kock Jensen

## CO-RO A/S

The popular products Sunquick, Suntop, Sun Lolly, and Suncola are enjoyed by people around the world. CO-RO, based in Frederikssund, has provided refreshing beverages and ice lollies since 1942, and today they have a global presence in over 80 countries.

### **Efficient maintenance work in an industry full of certifications and regulations**

As a global producer of beverages and ice lollies, CO-RO face high demands in daily operations. Especially within the food industry, there are numerous laws and requirements that food companies must keep track of.

***"We live in a world full of certifications and regulations, and we cannot just store our food certifications randomly. If an inspection happens, we need to be able to show them exactly what they want to see."***

System Administrator, Lasse Kock Jensen

### **Maintenance across teams and locations**

Since CO-RO's production is spread across two locations, smooth collaboration between the many employees and teams is essential. One of their requirements for a CMMS system was, therefore, to establish consistent routines across locations and teams.

With a team of nearly 200 people, CO-RO need to

provide employees with a clear overview. The tasks must be structured efficiently so that everyone know exactly what they need to do, to ensure that maintenance work is completed on time.

### **Prioritizing 21,000 jobs**

Filtering job lists and users helps CO-RO put important jobs in focus and ensure optimal use of the right resources.

***"Search and filtering functions are especially important for our users. They create clarity and ensure that our employees only see relevant jobs. Job groups provide us with an overview that has significantly improved our efficiency."***

System Administrator, Lasse Kock Jensen

The [INEXTIA App](#) has become an important tool for employees, allowing them to take job lists and the spare parts inventory with them wherever they go.

They can create, activate, and complete tasks directly at the machine, while also recording which spare parts are used from inventory. This ensures a continuous overview of spare parts usage, while giving them access to job history at all times.

### **Stock App and QR codes for spare parts overview**

With over 21,000 jobs and 10-12,000 spare parts spread across 50 warehouses, CO-RO need to keep tight control over their inventory.

QR codes on all equipment and components – from machines to restrooms – make it easy to locate the exact spare part needed.

Through the [INEXTIA Stock App](#), CO-RO can also adjust inventory levels and conduct inventory checks across locations.

### **Simplified inspections with centralized documentation**

CO-RO highlight that one of INEXTIA's greatest advantages is its ability to connect documents, service reports, and certificates to the correct jobs seamlessly.

Documentation and certifications only need to be uploaded once and are easily accessible when authorities, such as the Danish Veterinary and Food Administration, require them.

***"When the Food Administration comes knocking, we can display all necessary documentation with just a few clicks in INEXTIA, which saves a lot of time during inspections."***

System Administrator, Lasse Kock Jensen

INEXTIA simplifies documentation display and maintenance record-keeping, which ensures compliance with all regulatory requirements and prepares CO-RO for inspections without disrupting their workflow. This contributes to more efficient inspections, saving them both time and resources.

Document management with version history also allows access to previously uploaded documents.

***"INEXTIA ensures that the maintenance work operates efficiently across teams and locations, and that our documentation is always up-to-date and easily accessible. This means the necessary documentation can be retrieved without delay, supporting a smooth workflow and easy regulatory compliance."***

System Administrator, Lasse Kock Jensen

### **Five benefits of INEXTIA according to CO-RO**

- » Efficient document management
- » Search and filter functions that provide job overview
- » Mobility and flexibility with jobs that can be created and completed directly at the machines
- » Spare parts overview
- » Consistent processes across teams and locations
